I.V. HOUSE[®]

Protection Over and Above[®]

949S TLC[®] Foot Splint—Directions

Single Use Only—Fits either foot, laterally or medially

1. **Orient the concave side of the splint facing upward** and unroll the straps.
2. **Align the infant's ankle with the splint's middle opening.** The heel should roughly coincide with the prominent curve at the outer edge of the splint.
3. **Rotate the splint to position it** laterally or medially, on a left or right foot and determine which end will be fit to the toe and which end will be fit to the lower leg.
4. **Note that each of the two strap anchor slots has two positions.** With the splint oriented as it will fit to the infant's foot, slide the strap to the top position in each slot.
5. **Leg Strap:** Slide strap under IV tubing and wrap the top strap around the lower leg and the splint. Secure tubing at lower leg with final pass of strap. Fasten with Velcro[®] tab.
6. **Toe Strap:** Wrap the bottom strap over the toes, under the loop of tubing, and slip the free end through the hole in the splint near the toes. Fasten with Velcro[®] tab.
7. **Note:** Slip one finger beneath each strap to ensure the fabric is not so tight that it impedes circulation or infusion of IV fluids.
