Protection Over and Above[®]

TLC[®] Elbow Splint with Straps

Directions: Single Use Only—Fits either arm

1. **Unroll the TLC Elbow Splint straps** and identify the smooth concave surface of the splint. This concave surface will be placed against the patient's arm.
2. The **"forearm/upper arm" label indicates proper placement**. Remove the label before applying the splint.
3. **Place the splint under the patient's arm**, with the narrow end of the splint toward the hand and the wide end above the elbow. The point of the elbow should align with the center opening. **We recommend a thumbs-up application** whenever possible.
4. **Wrap the first strap around the forearm**. Thread the Velcro[®] tab into slot and pull it through. Fold the strap around the outer edge of the splint and back onto itself. Secure with Velcro tab.
5. **Repeat with the other two straps**, securing each with the Velcro tab.
6. **Note:** Slip one finger beneath each strap to ensure the fabric is not so tight that it impedes circulation or infusion of IV fluids.
7. **If the elbow strap obscures the catheter insertion site**, consider a crisscross strap configuration instead. Put the elbow strap through the upper arm slot and the upper arm strap through the elbow slot.
