I.V. House, Inc. awarded IV catheter tube securement agreement with Premier

St. Louis, MO – September 1, 2020 – I.V. House, Inc. has been awarded a group purchasing agreement for IV catheter tube securement with Premier. Effective September 1, 2020, the new agreement allows Premier members, at their discretion, to take advantage of special pricing and terms pre-negotiated by Premier for IV therapy joint stabilization and IV insertion site protection products.

“The mission of I.V. House is centered around nurses, patients, and their peripheral IV insertion sites,” said I.V. House CEO, Lisa Vallino. “Whether the patient is an infant, child or older adult, I.V. House products improve IV site securement and protection. In fact, it’s hard to imagine any patient who wouldn’t benefit from an I.V. House product.”

I.V. House is the industry leader in creating innovative IV therapy joint stabilization and IV insertion site protection devices. The award-winning TLC® Splint, available for the wrist, elbow, and foot, is the only armboard ergonomically-designed to fit the anatomy of the patient while holding the joint in the functional position for IV therapy infusion. See-through openings in the device allow nurses to Touch, Look, and Compare the IV insertion site with the opposite extremity to check for early warning signs of complications.

The clear, ventilated plastic domes on the I.V. House UltraDome® and I.V. House UltraDressing® provide superior protection to the IV catheter and loop of tubing. These devices give nurses easy accesses to the IV insertion site for routine assessments, while protecting the patient from accidental bumps and snags that can lead to dislodgment, extending dwell times and reducing the need for costly and time consuming restarts.

Premier is a leading healthcare improvement company, uniting an alliance of approximately 4,100 U.S. hospitals and 200,000 other providers to transform healthcare. With integrated data and analytics, collaboratives, supply chain solutions, and advisory and other services, Premier enables better care and outcomes at a lower cost.

ABOUT I.V. HOUSE, INC.

Founded in 1991, I.V. House brings innovative products that stabilize, secure, and protect IV insertion sites to hospitals worldwide. I.V. House products combine Human Factors and Ergonomics with thoughtful input from nurses to deliver real-world solutions that improve patient safety and increase nurse efficiency, and reduce hospital costs.
